How the sketch was converted: each row of the sketch was mapped onto the matching strip of the surveyed site, top = NW end, bottom = the surveyed ENTRANCE on Davis Road. Every building keeps its place, neighbours and proportions from the sketch; all share one structural grid parallel to the site's long axis. The sketch's double outline becomes a perimeter promenade; the open spaces between buildings become one covered public spine: entry → cafe/games → library/press club → open forum → media/archive.

- Thick black = walls · double thin line = glazing · arcs = doors · dashed axes + bubbles = structural grid · ■ = colonnade of the covered spine.
FFL = ground level at each building's centre (from survey); buildings on slopes step inside or sit on piers — no regrading.
