# SITE ANALYSIS

Street life, activity nodes and the drainage channel — photographic survey

01

① **RETAIL** Shopfronts & kiosks
② **STREET VENDING** Fruit & vegetable carts
③ **WORKSHOPS** Storage sheds & yards
④ **TRANSPORT** Loaders, rickshaws, bikes
⑤ **SOLID WASTE** Dumping on open edges
⑥ **WATER CHANNEL** Open drain & green edge
⑦ **OPEN GROUND** Unbuilt plots, parking

## 01 URBAN MORPHOLOGY

A dense, fine-grain fabric of small plots and narrow lanes. Building footprints are tightly packed, leaving little public open space inside the blocks; streets carry most everyday activity.

## 02 DRAINAGE CHANNEL

The open channel (blue) runs as a continuous linear spine through the site. Its edges alternate between green verges and neglected strips used for dumping, splitting the neighbourhood into two halves.

## 03 COMMERCIAL FRONTAGE

Small shops, kiosks and vending carts gather along the main roads and at street junctions, forming informal activity nodes.

FIG. 01 Observation map — survey points, photographs and drainage channel

## 04 WORKSHOPS & STORAGE

Sheds with large metal doors and open yards indicate light industry and storage mixed into the residential fabric.

## 05 WASTE & OPEN EDGES

Refuse accumulates on vacant plots, wall bases and along the channel — edges without clear ownership or use.

## 06 OPEN GROUND

Large unbuilt land on the eastern side is used for loading and parking; it is the main reserve of open space for the area.

### LEGEND

- Site photograph
- Survey / observation point
- Photo leader line
- Water / drainage channel

NOTE Observation points were recorded on site; each photograph is linked by a leader line to the red marker where it was taken. Base drawing reproduced without alteration.
