INFORMAL LAND USE

Street-level mapping of informal activities | observation points & spatial nodes

ACTIVITIES

Everyday informal uses observed along the market street and vacant plots of the site.

01
Grazing

02
Produce sorting

03
Rickshaw parking

04
Home business

05
Food preparation

06
Street play

07
Street vending

08
Parking & loading

STREET VENDING

Fruit carts line the market street. Mobile vending occupies the street edge and narrows movement space to a pedestrian scale.

GRAZING ON VACANT PLOTS

Buffaloes graze on empty plots inside the settlement. Unbuilt land becomes shared pasture, showing how rural livelihoods continue within the urban fabric.

VACANT LAND

Undeveloped land at the site edge is used for dumping, grazing and short-cut paths. It forms a soft, unplanned edge between the settlement and open land.

PRODUCE SORTING

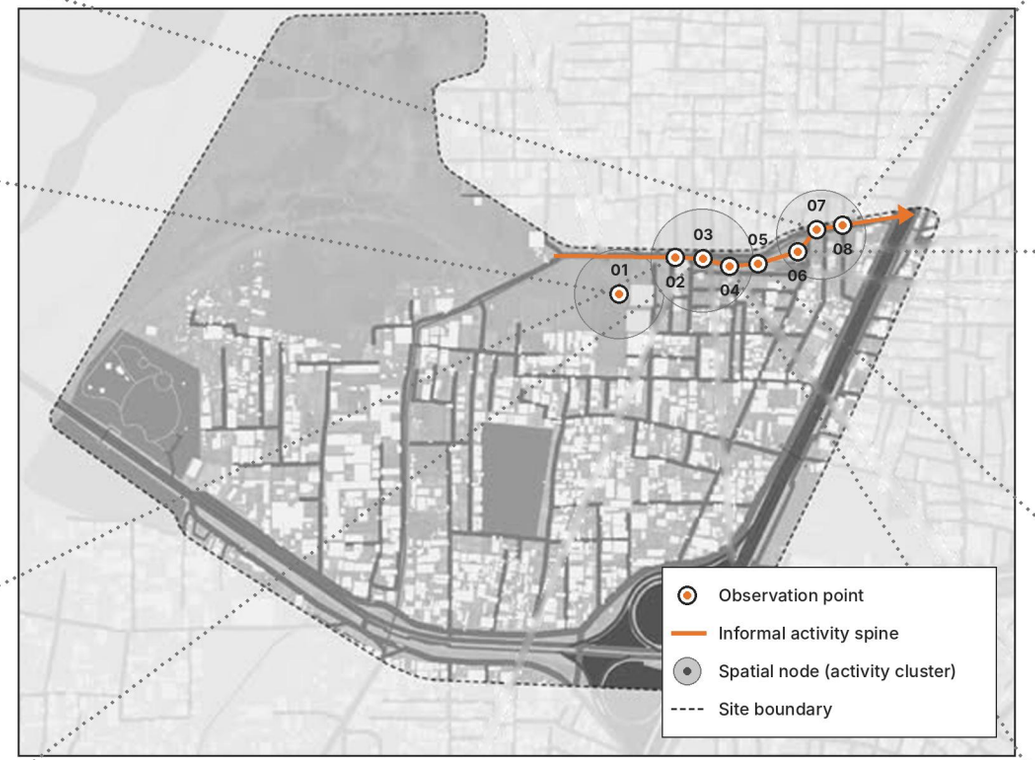

Onions are sorted and dried directly on the street edge. Wholesale trade spills out of storage and turns the street into a temporary work yard.

RICKSHAW PARKING

Narrow alleys double as parking and loading bays for loader rickshaws, linking household workshops and stores to the market street.

PARKING & LOADING

Loader rickshaws and motorcycles park along the street, which acts as an outdoor extension of shops and workshops.

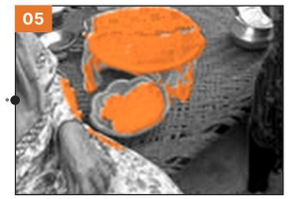

STREET PLAY

A vendor's portable swing turns a street corner into a play space for children: a temporary, informal public amenity.

FOOD PREPARATION

Food is prepared on charpais outside the house. Domestic work extends into the street threshold and supports small-scale cooking and sale.

HOME-BASED BUSINESS

Shutter fronts and hand-painted signs mark small businesses run from homes. The line between house and shop is thin and shifts through the day.

INFORMAL LAND USE ANALYSIS

The commercial street along the northern edge of the site is the spine of informal activity. Within a narrow street section, trading, mobile vending, produce sorting, food preparation, parking and children's play overlap, while vacant plots to the west are used for grazing and dumping. These uses are temporary and flexible: they change with the time of day and the season, and they depend on the street as a shared, multi-use space rather than a route for movement only. Thresholds between house, shop and street are blurred, so many livelihoods rely on open, accessible ground. Any design intervention should keep space for these activities, support them with shade, storage and services, and avoid displacing the people who depend on them.
